CROWNCORE ERP FOR AGRO-DEALERS & FARM INPUTS

Stock up before the rains. Collect after the harvest.

CrownCore keeps inputs in the units you buy and sell, stocks each branch ahead of the season, and follows farmers' accounts until they are paid.

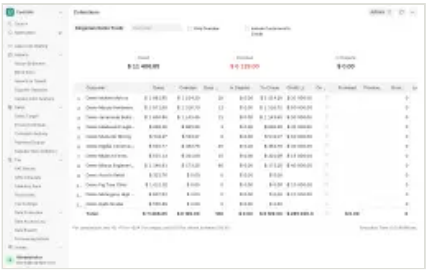

Stock where the farmers are

See every branch's stock, what is committed and what is available, and move inputs between branches through transit before demand peaks.

A till for rural branches

The till keeps selling when the connection drops and checks each sale when it returns. Scale labels add weighed goods with their weight or price.

Seasonal accounts, followed up

Give farmers and estates terms that fit the season, then follow overdue balances, promises to pay and disputes until they are settled.

Built for how Zimbabwe works

- Payment terms per customer or group, such as payment after harvest
- Batches and expiry on seed and chemicals where you need them
- Paynow for EcoCash and OneMoney, once your Paynow account is connected
- USD and ZWG prices, with the rate used recorded on every sale
- ZIMRA FDMS certified fiscalisation; each business registers its own fiscal devices

Does CrownCore manage our own farming?

No. CrownCore is for selling and supplying inputs: stock, sales, accounts and payroll. Crop planning and field records are not included.

Can a farmer pay over the season?

Yes. Credit sales carry their terms and due dates, part payments are allocated against invoices, and lay-by is available at the till.
