CROWNCORE ERP FOR CONSTRUCTION & CONTRACTORS

Know what each site costs, while it is still being built.

CrownCore keeps each job's tasks, the materials bought for it, the expenses claimed on it and the invoices raised from it together, alongside plant and payroll.

Each site a project

Plan the work as tasks, see every project on one timeline, and follow progress from the first survey to handover.

Plant and vehicles

Keep plant, vehicles and tools on record with their cost, location and depreciation.

Spending approved before it happens

Purchase orders and payments above your limits wait for the right person. Supplier invoices are matched to what was ordered and received.

Built for how Zimbabwe works

- Purchases, expense claims and invoices recorded against the project
- Suppliers see their orders and invoices on the supplier portal
- Site staff on payroll with overtime, loans and Labour Act leave
- ITF263 checks and withholding on suppliers without a valid certificate
- ZIMRA FDMS certified fiscalisation; each business registers its own fiscal devices

Can we see profit per project?

Yes. Sales, purchases and expenses carry the project, so what each project has billed and spent can be reported.

Does CrownCore do bills of quantities or progress certificates?

No. Estimating, bills of quantities and certificate formats stay in your existing tools. Client invoices are raised in CrownCore once a stage is certified.
