CROWNCORE ERP FOR IMPORTERS & DISTRIBUTORS

Know what is on the water, at the border and in the warehouse.

CrownCore follows each purchase from the supplier's order to the goods on your shelf, and brings freight, duty and clearing into the cost of the stock they belong to.

Shipments with their route and stage

Each shipment carries its supplier, route, carrier and clearing point, and moves through its stages from departure to customs to receipt, with expected dates worked out from your lead times.

Stock where it is needed

See stock by warehouse and branch, what is committed to orders and what is available, and transfer between locations with goods in transit tracked.

Approvals that hold the money

Purchase orders and payments above the limits you set wait for the right person, and everyone waiting on a decision can see it.

Built for how Zimbabwe works

- Bills of Entry with duty and customs charges, entered from the declaration
- Freight, duty and clearing allocated to the stock they belong to
- Supplier deposits and payments in USD and ZWG
- Backorders noted on the order and filled as stock arrives
- ZIMRA FDMS certified fiscalisation; each business registers its own fiscal devices

Does CrownCore file our customs declarations?

No. Customs data is entered from the declaration you already have; CrownCore uses it to cost your stock and keep the shipment's record complete.

Can we see what is still to arrive?

Yes. Shipments in transit and stock still to arrive on purchase orders are shown, and the management overview totals them.
