CROWNCORE ERP FOR MINING & MINING SUPPLIERS

Keep the stores, the plant and the payroll under control.

CrownCore runs the stores, the purchasing behind them, the plant and equipment, and payroll for your workforce, with sales by mineral reported for royalties.

Plant and equipment on record

Keep plant, vehicles and equipment with their cost, location and depreciation, alongside the accounts.

Purchasing that waits for approval

Requisitions from the stores, quotations compared across suppliers, and orders above your limits held for the right person. Imported spares carry their freight, duty and clearing into cost.

Payroll for the workforce

Monthly or more frequent pay, overtime, loans and allowances, with PAYE, NSSA, the AIDS levy and NEC contributions worked out and the statutory returns prepared.

Built for how Zimbabwe works

- Mineral and royalty rate set on each item; the Mineral Royalty report totals sales by mineral
- NEC contributions set for your industry's council
- Bills of Entry and landed costs on imported spares
- Stock counts at each store, with adjustments on record
- ZIMRA FDMS certified fiscalisation; each business registers its own fiscal devices

Does CrownCore file our royalty return?

No. The Mineral Royalty report calculates royalties from sales by mineral at the rates you set. It doesn't post a journal or produce the return, and the rates and valuation basis are confirmed with your adviser.

Does it manage mine production or geology?

No. CrownCore covers the business side: stores, purchasing, assets, sales, payroll and the books.
